CS444 Homework 3

Lilliana Watts, Nicholas Skinner, Yong Ping Li

May 23, 2018

DESIGN PLAN

WRITEUP QUESTIONS

A. What do you think the main point of this assignment is?

- The main point of this assignment seems to be to learn how to use a poorly documented API, for this assignment, it is the Kernel Crypto API. Another addition to the main point would be to have us learn to find resources to make newer drivers compatible with older implementations of an operating system.

B. How did you personally approach the problem? Design decisions, algorithm, etc.

- Answer

C. How did you ensure your solution was correct? Testing details, for instance.

- Answer

D. What did you learn?

- Document, document document. Documentation is very important when creating a system, or any segment of code for that matter. We also learned that we are able to search for programs that had been created for other operating systems with similar architecture for code for general ideas on how to implement the program that we are trying to write.
